Clearwater Lead Service Line Inventory, 2026

Prepared by the Clearwater Water Department for the Board of Water Commissioners.

Where the lead is

Clearwater still carries drinking water to homes through lead service lines. The 2026 inventory walked every connection in the city. Eastgate holds 31% of the lead lines that remain, the most of any neighborhood, and its homes are the oldest in the city.

What it costs

Replacing a lead service line costs $9,800 on average, the street side and the home side together. Crews replaced the most lines in the department's history last year, but at that pace the work would not finish until 2034.

What the money is

Federal and state programs hold $42 million for Clearwater's lines through 2030. The federal rule requires every lead line replaced by 2037.

The proposal

The department proposes to replace every remaining lead line by 2032: 3,700 lines a year, Eastgate first, with the grants covering most of the cost.
